Manufacture

Heat A, B separately to approx. 80°C and add A to B under stirring. Homogenize and cool down to 60°C under stirring. Add phase C and homogenize again for a short moment. Cool down under stirring and add D below 40°C. Mix phase E and stir until uniform. Add it to the emulsion while gentle stirring. Add F and adjust pH-value to 6.2.

The recommendations and formulations given are based on our knowledge and experience in the field of technical application. They are, to the best of our belief, correct, but are offered without obligation. Those who use our recommendations and formulations as well as those who process CLR Active Agents are themselves responsible for the adherence to prevailing statutory regulations and the observance of patent rights as well as other protective rights for other companies.

*) This formula has been manufactured and stability tested using a special preservative, but has not been subjected to microbiological challenge tests.
